

Implement Client Script & UI Policy (Incident)

Milestone 2: Create UI Policy Action – Urgency

Description

Create a **UI Policy Action** for the **Urgency** field on the Incident form to control its behavior based on the conditions defined in the UI Policy. Configure the action to make the Urgency field **mandatory, visible, or read-only** as required. This ensures that the appropriate urgency information is captured consistently and helps users prioritize incidents accurately.

Activity 1: Configure the Urgency Field

Description

1. Open the UI Policy Actions

Go to the **High Impact Control** UI Policy you created earlier. Scroll down to the **UI Policy Actions** related list. This is where you define the specific behavior of fields when the policy conditions are met.

2. Create a New Action

Click **New** to create a UI Policy Action. This lets you configure how individual fields behave when the UI Policy is triggered.

3. Fill in the Action Details

- **Field name:** Urgency
Select the **Urgency** field on the Incident form. This is the field you want to control.
- **Read-only:** true
Check this option to make the Urgency field read-only whenever the UI Policy condition is met (Impact = High). Users will be able to see the field but cannot change its value.
- **Visible:** Leave this field as is (do not change).
By leaving it unchanged, the field will remain visible on the form, but its behavior will be controlled by the Read-only setting.

4. Submit the Action

Click **Submit** to save the UI Policy Action. The action is now linked to the High Impact Control UI Policy and will automatically apply to the Urgency field when an Incident has High Impact.

5. Optional Verification

To test the action:

- Open an Incident record.
- Set the **Impact** field to **High**.
- Check that the **Urgency** field becomes read-only.
- Change Impact to a different value to confirm that the field reverts back if needed.

The screenshot shows the 'UI Policy Action - New Record' form in ServiceNow. The form is titled 'UI Policy Action - New Record' and includes a search bar and a 'Submit' button in the top right corner. Below the title bar, there is a blue informational banner stating: 'UI policy actions specify exactly what actions to take on a specified field. The conditions specified in the UI policy determine when these actions are triggered. [More Info](#)'. The form fields are organized into two columns. The left column contains: 'UI policy' set to 'High Impact Control', 'Table' set to 'Incident [Incident]', and '* Field name' set to 'Urgency'. The right column contains: 'Application' set to 'Global', 'Mandatory' set to 'Leave alone', 'Visible' set to 'Leave alone', and 'Read only' set to 'True'. Below these fields is a 'Clear the field value' checkbox. A 'Submit' button is located at the bottom left of the form area.
