

Implement Client Script & UI Policy (Incident)

Conclusion:

Description

This project successfully demonstrates the implementation of UI Policies, UI Policy Actions, and Client Scripts on the ServiceNow Incident table. The configuration enables dynamic field behavior, validation, and controlled data entry based on user actions and predefined conditions. By testing different scenarios, the Incident form and list view become more user-friendly, consistent, and reliable, helping improve overall data quality and incident management efficiency.

The Implement Client Script & UI Policy (Incident) micro project effectively demonstrates how **UI Policies** and **Client Scripts** can work together to enforce dynamic field behavior, automate updates, and prevent incorrect data submission on Incident forms. By using `onChange`, `onSubmit`, and `onCellEdit` scripts alongside UI Policy actions, the project ensures fields like **Assigned To** and **Urgency** respond appropriately to changes in **Impact**, maintaining clean and consistent data. This solution not only enforces mandatory fields and controls user interactions but also remains lightweight, efficient, and easy to implement, making it ideal for short-duration micro projects while showcasing practical best practices for improving form usability and data integrity in ServiceNow.
